

Custom Security Training

Protect Employees Across Your Organization

Prepare Your End Users

When it comes to cyber threats, your employees are often the largest and most vulnerable attack surface. One of the most effective means of securing your employees is consistent and customized training. iCorps offers cyber awareness training to educate your team about the latest threats. Our training programs are designed around your tech stack and industry best practices. We offer virtual and in-person training sessions, which are capped at 10 participants per session. Each session is followed by an exam. Our custom trainings cover:

What's Included -
